DESIGN CONSIDERATIONS

DECOR SELECTION

Dark, high gloss colours are more likely to highlight finger marking and wear and tear therefore careful consideration should be taken when selecting these colours for harshly lit or high use areas. Lighter colours are more tolerant of harsh lighting environments.

SERATONE® JOINTERS

The Seratone® range of aluminium jointers has been specifically designed for use with Seratone® in both wet and dry area applications. Seratone® can be easily cut and shaped for use in sliding and conventional opening aluminium door systems.

FRAMELESS PANELS

You can create the thickness you require for standard concealed hinges or where a thicker or double-sided panel is required. Seratone® can be laminated to panel products such as MDF, using normal woodworking glues. Edges can be finished using contrasting edge-banding, timber clashing or the edges can be painted.

BESPOKE COLOURS

Seratone® Aqua is available in a wider decor range. Minimum order quantities apply. Contact your Laminex Sales Representative on 0800 303 606.

TILE ALIGNMENT

To ensure perfect tile pattern alignment for Herringbone, Subway and Square Tiles, cutting of sheets **will** be required when continuous runs of sheets are installed. It is recommended this is allowed for when planning the installation of the sheets. Cutting for continuous pattern can be achieved, refer to the Seratone® Technical Manual for the cutting and wastage factor details.

COLOUR OR BATCH MATCHING

Always check for a colour match when sheets are on the same wall plane or when colour/shade matching is critical. For areas where colour matched sheets are desired, order as a "batch matched" to minimise colour variation.
